## Projects

---

31 Days

### MediParity

MediParity is an AI and Machine Learning based platform that uses price transparency data to better inform how all payers and providers can model unit costs for healthcare services.

62 Days

### LIC-DigiLocker-Integration

By using this project the LIC customer can link their pan with the policies. We did the integration of LIC with Digi Locker to fetch the pan card from the user's Digi locker account so that the user can provide the pan details to Lic for the pan linking process. There is also a provision to upload documents that are already downloaded from Digi locker, and the application will post that pan information to LIC.

579 Days

### Scheduling System

This is an application for incorporating and conducting scheduling activities related to exam conduction of the candidates, mapping the candidates of the institute with the exam venues, and assigning them exam batches according to the available seats and time slots.

## Certification

---

- Java Web Application Development
